

# BIOFUELS

From conceptual engineering through project realization, make the most of your biofuels initiative with Mustang's proven performance.

Biofuels comprise a critical and growing part of the Mustang project portfolio. Mustang has experience in all of the biofuels pathways, including fermentation, biomass gasification, and syngas processing. We have the proven capability to make your biofuels project a reality.

## Start-to-Finish Leadership

Mustang is committed to leadership among process plants and process licensors in developing—and then improving—safe, cost effective projects. We offer full spectrum project services in the development and eventual commercialization of your new technology through:

- Conceptual / Feasibility
- Process Packages for Proprietary Technologies
- Basis of Design (Pre-FEED)
- Front-end Engineering Design (FEED)
- Full engineering, procurement and construction management services (EPCM)
- Commissioning and Start-up
- Operational Support through Wood Group Operations and Maintenance

## Built on a Legacy of Success

Our biofuels team has proven its process engineering expertise across several projects, including the full design of two major biofuel plants using some of the latest technology concepts. Today, Mustang is very active supporting a number of major developing projects around the globe.

## Global Experience, Total Confidence

Biofuels is an emerging and fast-paced field—with many emerging alternative fuels, technologies, business models and political considerations. Mustang customers face these challenges with the assurance and stability that comes with a world-class engineering partner. Our reputation for quality engineering, design and project management services extends from South Texas to the South Pacific. And with access to a global pool of Mustang specialists from every discipline, you, too, can realize the potential of your biofuels project.
